

Custom Wheelchair Seating

We don't just provide wheelchair seating; we provide comfort

Our experienced and skilled technicians make UDS Custom Wheelchair Seating the leading seating resource for therapists, individuals, families, and caregivers throughout the Central Pennsylvania region. Our process captures the exact curvature of the spine to form seating unique to each individual. Molded seating systems provide many health and functional benefits, including decreasing the risk of pressure sores, enabling proper breathing and swallowing and helping our clients maintain an upright posture.

We provide additional comfort tools

Our seating systems fit on any manual or power wheelchair for children or adults. We fabricate many other positioning components such as trays, footboxes, hip belts and headrests. We also provide pressure mapping technology. Our goal is to ensure optimum comfort and functionality for each individual.

Working Better Together

Because UDS has our own in-house Mobility and Rehab Equipment division, we can provide both the wheelchair and the seating. We specialize in manual, power and complex rehab wheelchairs. Although Custom Wheelchair Seating can work with other local Home Medical Providers, when you get your chair from UDS, scheduling is easier, billing procedures are simplified and communication is more efficient for the family, the therapist and for all involved.

Cost For Services

In many cases, the cost of the custom seating is paid for entirely by insurance. Please contact our team of professionals for questions relating to cost and insurance coverage.
